

```

import java.util.*;

class Prime {

    public static void main(String[] args) {

        Scanner input = new Scanner(System.in);

        int low , high;

        System.out.println("Enter 2 numbers between which prime numbers are to be found: ");

        low = input.nextInt();

        high = input.nextInt();

        while (low < high) {

            int flag = 0;

            for(int i = 2; i <= low/2; ++i) {

                if(low % i == 0) {

                    flag = 1;

                    break;

                }

            }

            if (flag != 1 && low != 0 && low != 1)

                System.out.print(low + " ");

            ++low;

        }

    }

}

```

```

Enter 2 numbers between which prime numbers are to be found:
1
11
2 3 5 7

```
